**EC: Add all additives into solution tank first, then top up with The Professor's Original A & B Nutrient to reach your EC value.**

#### Important

For best results empty reservoir tank weekly.  
Keep Nutrient tank aerated.  
Maintain water temp between 20-24 C.  
Check and maintain EC and pH Values.

*Flower Boost can be used until week 8.  
For higher yielding results we recommend stopping at week 5, then apply Extreme Boost instead.*

Note : **EC** Values are only rough guidelines. Some plants may require higher or slightly lower EC Values  
**pH** : To ensure vital nutrient absorption, it is recommended that pH is maintained between 5.5 - 6.5.
