

The smarter way to grow

What makes GreenSmart™ the smarter alternative?

GreenSmart™ pot is the ideal vehicle for organic plant growth. This is because of its distinctive, yet simple, engineering design, which creates the optimum environment and conditions for plant growth:

- ✓ Food grade plastic eliminates any contamination of the plant.
- ✓ Cross-cut overflow holes in the pot: prevents over-watering of plants, and insects entering the reservoir and breeding; and creates an air cushion between the potting mix and water reservoir for the roots to be aerated.
- ✓ The aeration of the roots enhances plant growth.
- ✓ Depth and width of the pot allows the flexibility to grow a diverse range of plants.
- ✓ Plastic inner plate with its wick-watering system allows constant delivery of water ensuring plants grow at peak performance.
- ✓ Patented transparent water level indicator enables easy monitoring of the water reservoir, eliminating any guesswork with regard to the watering requirements of plants.

Some examples of different produce that can be grown in different seasons:

Cool Season

Broad Beans, Broccoli,
Brussel Sprout, Cabbage,
Cauliflower, Kohlrabi,
Onion, Pak Choy, Peas,
Shallots, Snow Peas,
Spring Onions, Parsnip
Turnip

Intermediate Season

Artichoke, Beetroot, Bok
Choy, Carrot, Celery,
Endive, Florence Fennel,
Garlic, Kale, Leek,
Lettuce, Onion, Parsley,
Radish, Silverbeet, Spinach

Warm Season

Basil, Beans, Capsicum,
Chilli, Chives, Climbing
Beans, Corn, Cucumber,
Eggplant, Gourd, Melons,
Malabar Spinach, Okra,
Potatoes, Pumpkin,
Tomatoes, Zucchini.
